Description

The vertical supports enable the rigid or flexible flat collectors to be fastened into position in front of the needle for every static electrospinning application.

Made of Plexiglas, they feature a perforation allowing to install them on the modular supports

with special screws for a secure and stable hold that guarantees electrospinning with accurate and repeatable geometries over time.

The use of dielectric supports in Plexiglas allows to correctly manage electricity-conducting collectors -with even small shapes and geometries- where to concentrate the electric field, and so the nanofibers, avoiding their being attracted by unwanted metal surfaces.

Dimensions (vertical face and thickness)

200X200 mm Tk=5 mm
