Description

TiO ₂ functionalized with amino-silane: chemical - physical characteristics	
Characteristics:	WAFAS
Description:	colloidal suspension of titanium dioxide nanoparticles in water functionalized with amino-silane
Appearance:	milky fluid
Crystalline phase:	Anatase
TiO ₂ concentration (‰w/w):	5.5 ± 0.5
Si concentration (‰w/w):	0.35 ± 0.05
Particle dimensions (nm) (DLS Malvern Instrument):	50 ± 10
Polydispersity index PDI:	0.30 ± 0.05
Stability:	12 months

Intended users:

The product can be applied as it is on various types of surfaces to impart properties of photocatalysis:

- Natural stones: elimination gaseous pollutants (NO_x, VOCs ..), antibacterial.
- Nanofibrille cellulose: elimination gaseous pollutants (NO_x, VOCs ..) antibacterial.

Application conditions:

Spray-coating, brush, dip-coating

Target market:

Paper factories, cement factories, paint industries
